PREFACE i

SYMPOSIUM KEYNOTE

Harry Fair 1 Hypervelocity then and now

EXPERIMENTAL TECHNIQUES

Launchers

A. C. Charters 181 Development of the high-velocity gas-dynamics gun

Alex B. Wenzel 681 A review of explosive accelerators for hypervelocity impact

William F. Weldon 671 Development of hypervelocity electromagnetic launchers

M. M. Tower, G. L. Jackson, L. K. Farris and C. H. Haight 635 Hypervelocity impact testing using an electromagnetic railgun launcher

J. E. Osher, H. H. Chau, G. R. Gathers, R. S. Lee and R. C. Weingart 501 Application of a 100-kV electric gun for hypervelocity impact studies

A. E. Williams 703 A new hypervelocity shotgun

W. H. Holt, W. G. Soper and W. Mock, Jr. 357 Explosive gun launcher for impact studies

Diagnostics

W. M. Isbell 389 Historical overview of hypervelocity impact diagnostic technology

L. C. Chhabildas 205 Survey of diagnostic tools used in hypervelocity impact studies

H. F. Swift 623 High-speed image-forming instrumentation for hypervelocity impact studies

Gary R. Hough 363 Hypervelocity impact visualization with a new Cranz-Schardin camera

M. B. Boslough 173 Shock-induced solid-state chemical reactivity studies using time-resolved radiation pyrometry

Facilities

E. Igenbergs, S. Aigner, A. Huedepohl, H. Iglseder, H. Kuczera, M. Rott and U. Weishaupt 371 Launcher technology, in-flight velocity measurement and impact diagnostics at the TUM/LRT

A. J. Richards and A. V. B. Bowden 519 The development of a projectile velocity measuring system for the RARDE No. 2 hypervelocity launcher

A. J. Stilp 613 Review of modern hypervelocity impact facilities

NUMERICAL TECHNIQUES

Charles E. Anderson, Jr.	33	An overview of the theory of hydrocodes
Wallace E. Johnson and Charles E. Anderson, Jr.	423	History and application of hydrocodes in hypervelocity impact
Gordon R. Johnson and Robert A. Stryk	411	Eroding interface and improved tetrahedral element algorithms for high-velocity impact computations in three dimensions
Ted Belytschko and Jerry I. Lin	111	A three-dimensional impact-penetration algorithm with erosion
W. J. Flis	269	Advanced algorithms for computer simulation of hypervelocity impact
John T. Harrison and Wallace E. Johnson	293	HOIL: A two stage, hydrodynamic, numerical scheme linking HEMP and SOIL

MATERIAL RESPONSE MODELING

J. R. Asay and G. I. Kerley	69	The response of materials to dynamic loading
G. I. Kerley	441	Theoretical equation of state for aluminum
R. L. Bjork	129	The physics of hypervelocity lethality
Kathleen S. Holian and Michael W. Burkett	333	Sensitivity of hypervelocity impact simulations to equation of state
T. G. Trucano and J. R. Asay	645	Effects of vaporization on debris cloud dynamics
D. S. Drumheller	261	Hypervelocity impact of mixtures
D. J. Steinberg	603	Constitutive model used in computer simulation of time-resolved, shock-wave data

ANALYTICAL TECHNIQUES

Walter Herrmann and James S. Wilbeck	307	Review of hypervelocity penetration theories
J. Baker and A. Williams	101	Hypervelocity penetration of plate targets by rod and rod-like projectiles
D. E. Grady	285	Fragmentation of rapidly expanding jets and sheets
John D. O'Keefe and Thomas J. Ahrens	493	The size distributions of fragments ejected at a given velocity from impact craters
K. Frank and J. Zook	277	Energy-efficient penetration and perforation of targets in the hypervelocity regime
James Dehn	239	A unified theory of penetration
R. Jeffery Lawrence	451	A simple model for the optimization of stand-off hypervelocity particle shields
George R. Spillman	595	A simple defense conservative model for mass requirements of hypervelocity projectile impact shields for reentry vehicles
Peter S. Westine and Scott A. Mullin	693	Scale modeling of hypervelocity impact
Keith A. Holsapple	343	The scaling of impact phenomena
Michael D. Bjorkman and Keith A. Holsapple	155	Velocity scaling impact melt volume
Robert M. Schmidt and Kevin R. Housen	543	Some recent advances in the scaling of impact and explosion cratering
Salvo E. Arione and Michael D. Bjorkman	61	Scaling flow fields from the impact of thin plates

PHENOMENOLOGY STUDIES

Space and Planetary Science Studies

Burton G. Cour-Palais	221	Hypervelocity impact in metals, glass and composites
P. H. Schultz	569	Experimental planetary impact research
Thomas J. Ahrens and John D. O'Keefe	13	Impact on the earth, ocean and atmosphere
David J. Roddy, Sheldon H. Schuster, Martin Rosenblatt, Lisa B. Grant, Paul J. Hassig and Kenneth N. Kreyenhagen	525	Computer simulations of large asteroid impacts into oceanic and continental sites--preliminary results on atmospheric, cratering and ejecta dynamics
A. M. Vickery	655	Effect of an impact-generated gas cloud on entrained surface boulders and spall ejecta
H. J. Melosh	483	High-velocity solid ejecta fragments from hypervelocity impacts
E. Schneider and A. Stilp	561	Micrometeorite impact simulation at EMI-a review
H. Iglseder and E. Igenbergs	381	Measured charge generation by small mass impact at velocities between 1 and 45 km/s
U. Weishaupt	663	Hypervelocity impact of small masses on large surfaces of piezoelectric ceramics
Andrew J. Piekutowski	509	Debris clouds generated by hypervelocity impact of cylindrical projectiles with thin aluminum plates
Ching H. Yew and Rodney B. Kendrick	729	A study of damage in composite panels produced by hypervelocity impact

Defense Related Studies

A. E. Williams and M. A. Persechino	709	The effect of projectile properties on target cratering
S. J. Bless, Z. Rosenberg and B. Yoon	165	Hypervelocity penetration of ceramics
David L. Dickinson, Jerome D. Yatteau and Rodney F. Recht	249	Fragment breakup
V. Hohler and A. J. Stilp	323	Hypervelocity impact of rod projectiles with L/D from 1 to 32
D. A. Shockey, D. R. Curran, J. E. Osher and H. H. Chau	585	Disintegration behavior of metal rods subjected to hypervelocity impact
William Lawrence and Robert E. Franz	463	Stress measurements in glass using shaped-charge jets
J. C. Schulz, O. E. R. Heimdahl and S. A. Finnegan	577	Computer characterization of debris clouds resulting from hypervelocity impact
R. W. Meier	471	Numerical simulations of small projectiles impacting a multilayered target at hypervelocities
